Agenda

Let's recall an ordinary work week trying to find a solution to request of a customer

THE SCENARIO – COMPANY BIO

Insurance Multinational Group

+3K employees

+3BLN euros income

THE SCENARIO – THE CHALLENGE

Hi Riccardo,

Our users are using **Power BI** reports to analyze **historical data** describing **active policies and accidents**.

The Company built a **ML model** hosted on **Azure ML** that exposes an **API** to **evaluate customers and prospects risks** based on some parameters (age, sex, region and past diseases) in order to **propose relevant new policies and/or additional coverings**.

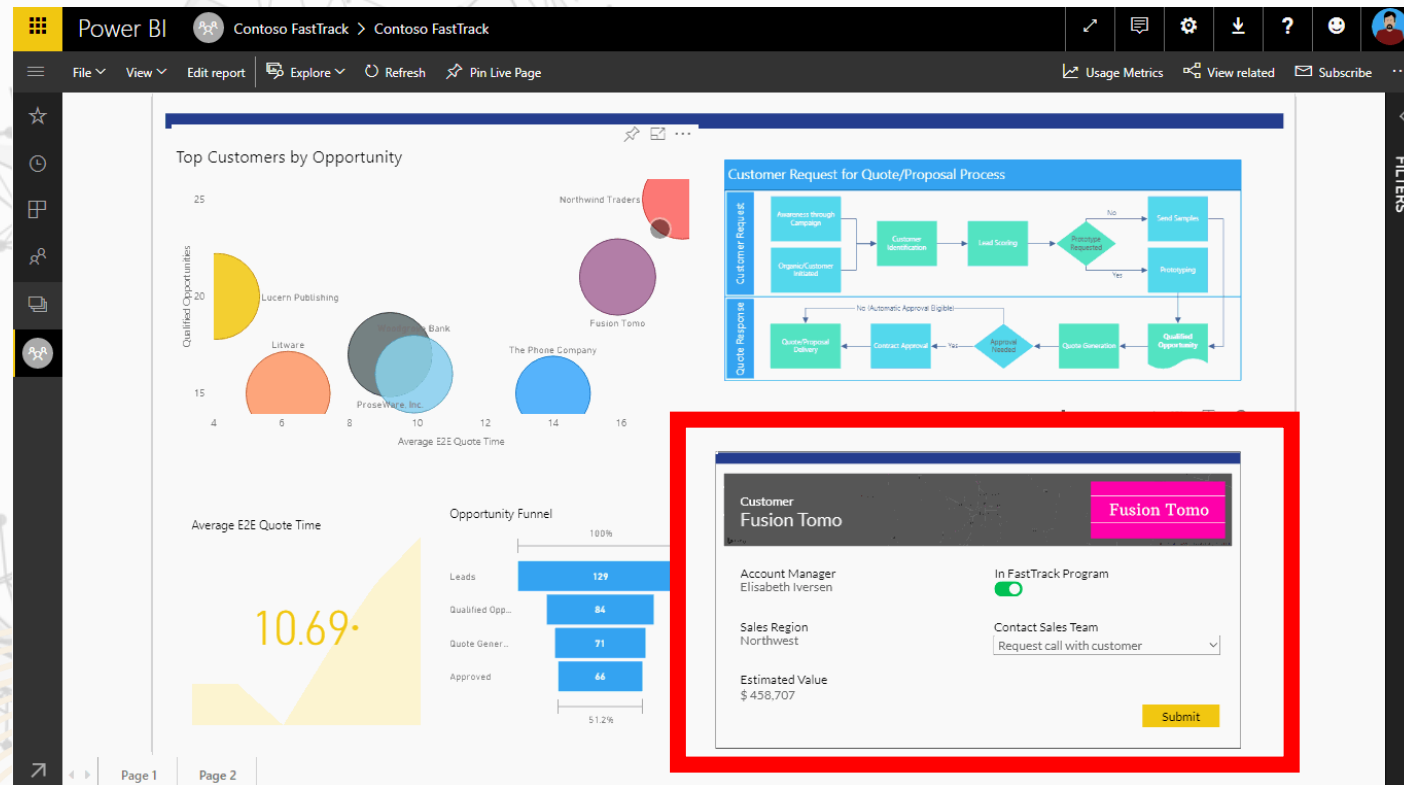

We would like our users to **query this API in real-time** while analyzing historical data in Power BI.
Users must **stay in the same APP**.

Can we do it? Cheers,
The Big Company

THE SCENARIO – DESIDERATA

- Support for multi-users concurrency
- Power BI must be the API input interface
- Power BI must be the API output interface
- API takes 3 to 5 seconds to answer
- API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values

While reading the email, my mind was like...

SOLUTION – EMBEDDING POWER APPS

- ✓✓ Support for multi-users concurrency
- ✓✓ Power BI must be the API input interface
- ✓✓ Power BI must be the API output interface
- ✓✓ API takes 3 to 5 seconds to answer
- ✓✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values

THE SCENARIO – THE CHALLENGE... PART 2

Oh, before I forget, **Power App is not allowed** by our group policy.

Cheers,
The Big Company

#GlobalPowerPlatformBootcamp
#GPPB2023

SOLUTION – EMBEDDING POWER APPS

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ✓ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ☠ Power Apps is not allowed by policy

SOLUTION – USING A FILE AS PARAMETERS INPUT

Solution:

1. Save an xlsx/csv file in a shared repository (ADLS?)
2. Let users populate the input file with parameters
3. Import input file in Power Query
4. Call API in Power Query with only specified parameters
5. Save API result in Power BI dataset
6. Expose result in Power BI visual

	Database	Database	
n2	 Azure HDInsight Spark Azure	 Azure SQL database Azure	
	 SharePoint Online list Online services	 FHIR Other	
	 Web API Other	 Web page Other	

SOLUTION – USING A FILE AS PARAMETERS INPUT

Support for multi-users concurrency

Power BI must be the API input interface

Power BI must be the API output interface

API takes 3 to 5 seconds to answer

API accepts 4 parameters

- Age: integer value greater than 0
- Region: 20 Italian regions
- Sex: Male or Female
- Past Diseases: More than 500 distinct values

Power Apps is not allowed by policy

	Database	Database	
n2	 Azure HDInsight Spark Azure	 Azure SQL database Azure	
	 SharePoint Online list Online services	 FHIR Other	
	 Web API Other	 Web page Other	

SOLUTION – IMPORT ALL POSSIBLE COMBINATIONS

Solution:

1. Create all possible parameters combinations
2. Call API with each combination
3. Import combination and result in a star schema model
4. Mount slicers on dimensions

SOLUTION – IMPORT ALL POSSIBLE COMBINATIONS

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ☠ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ✓ Power Apps is not allowed by policy

3 Past Diseases (A, B and C) yields to 7 combinations: A, B, C, AB, AC, ABC, BC
20 Regions * 2 Sexes * 100 ages * 7 past diseases combinations = 28 K API calls
28K * 3 secs = ... hours... many hours

SOLUTION – USE SQL SERVER AS PROXY

SOLUTION – USE SQL SERVER AS PROXY

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ✓ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ✓ Power Apps is not allowed by policy

Come on... SQL Server on-prem, On-premises Data Gateway, complex and expensive
In Italy we say... “Sparare ad una formica con un cannone”

SOLUTION – R/PYTHON VISUALS

Solution:

1. Import all parameters in Power BI Model
2. Mount slicers on dimensions
3. Use R or Python visuals to call API and to render response

SOLUTION – R/PYTHON SCRIPT

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ✓ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ✓ Power Apps is not allowed by policy

Do we have a winner?

LET'S TRY...

#GlobalPowerPlatformBootcamp
#GPPB2023

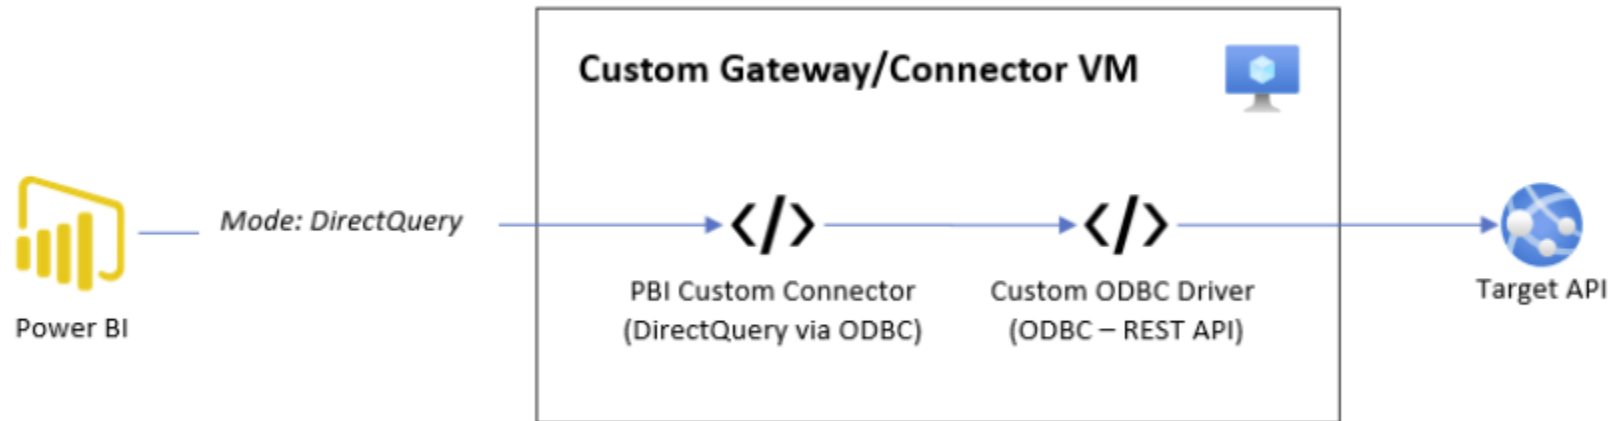

SOLUTION – R/PYTHON SCRIPT

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ✓ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ✓ Power Apps is not allowed by policy

We could add Power BI desktop to use on a laptop or a dedicated VM...
oh, “sparare ad una formica con un cannone...” again...

SOLUTION – CUSTOM DATA CONNECTOR

SOLUTION – CUSTOM DATA CONNECTOR

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ✓ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ✓ Power Apps is not allowed by policy

3rd party tools could be dangerous, and I don't want to develop anything to maintain

SOLUTION – PAGINATED REPORT VISUAL

Solution:

1. Import all parameters in Power BI Model
2. Mount slicers on dimensions
3. Create a Paginated Report with a custom VB function to call the API
4. Use Paginated Report visual to pass parameters to Paginated Report and render the result

SOLUTION – PAGINATED REPORT VISUAL

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ✓ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ✓ Power Apps is not allowed by policy

If this doesn't work, I'm done...

LET'S TRY... AGAIN...

#GlobalPowerPlatformBootcamp
#GPPB2023

SOLUTION – PAGINATED REPORT VISUAL

- ✓ Support for multi-users concurrency
- ✓ Power BI must be the API input interface
- ✓ Power BI must be the API output interface
- ✓ API takes 3 to 5 seconds to answer
- ✓ API accepts 4 parameters
 - Age: integer value greater than 0
 - Region: 20 Italian regions
 - Sex: Male or Female
 - Past Diseases: More than 500 distinct values
- ✓ Power Apps is not allowed by policy

If this doesn't work, I'm done...

LET'S SUMMARIZE

Solution	Breaking Point	Outcome
Power App Visual	Power App Disallowed by Policy	KO
External CSV/XLSX config file	Multi-user concurrency quite impossible	KO
Calculate all combinations outcome in advance	Too much combinations	KO
SQL Server as a Proxy	So much complicated	KO
R/Python Visual	Not working on service	KO
Custom Data Connector	So much complicated	KO
Paginated Report	Premium needed	OK

BREAKING NEWS!

Announcing support for paginated reports in Power BI Pro

Cookie McCray
Senior Product Manager

 November 14, 2022

 Share  Tweet  Like

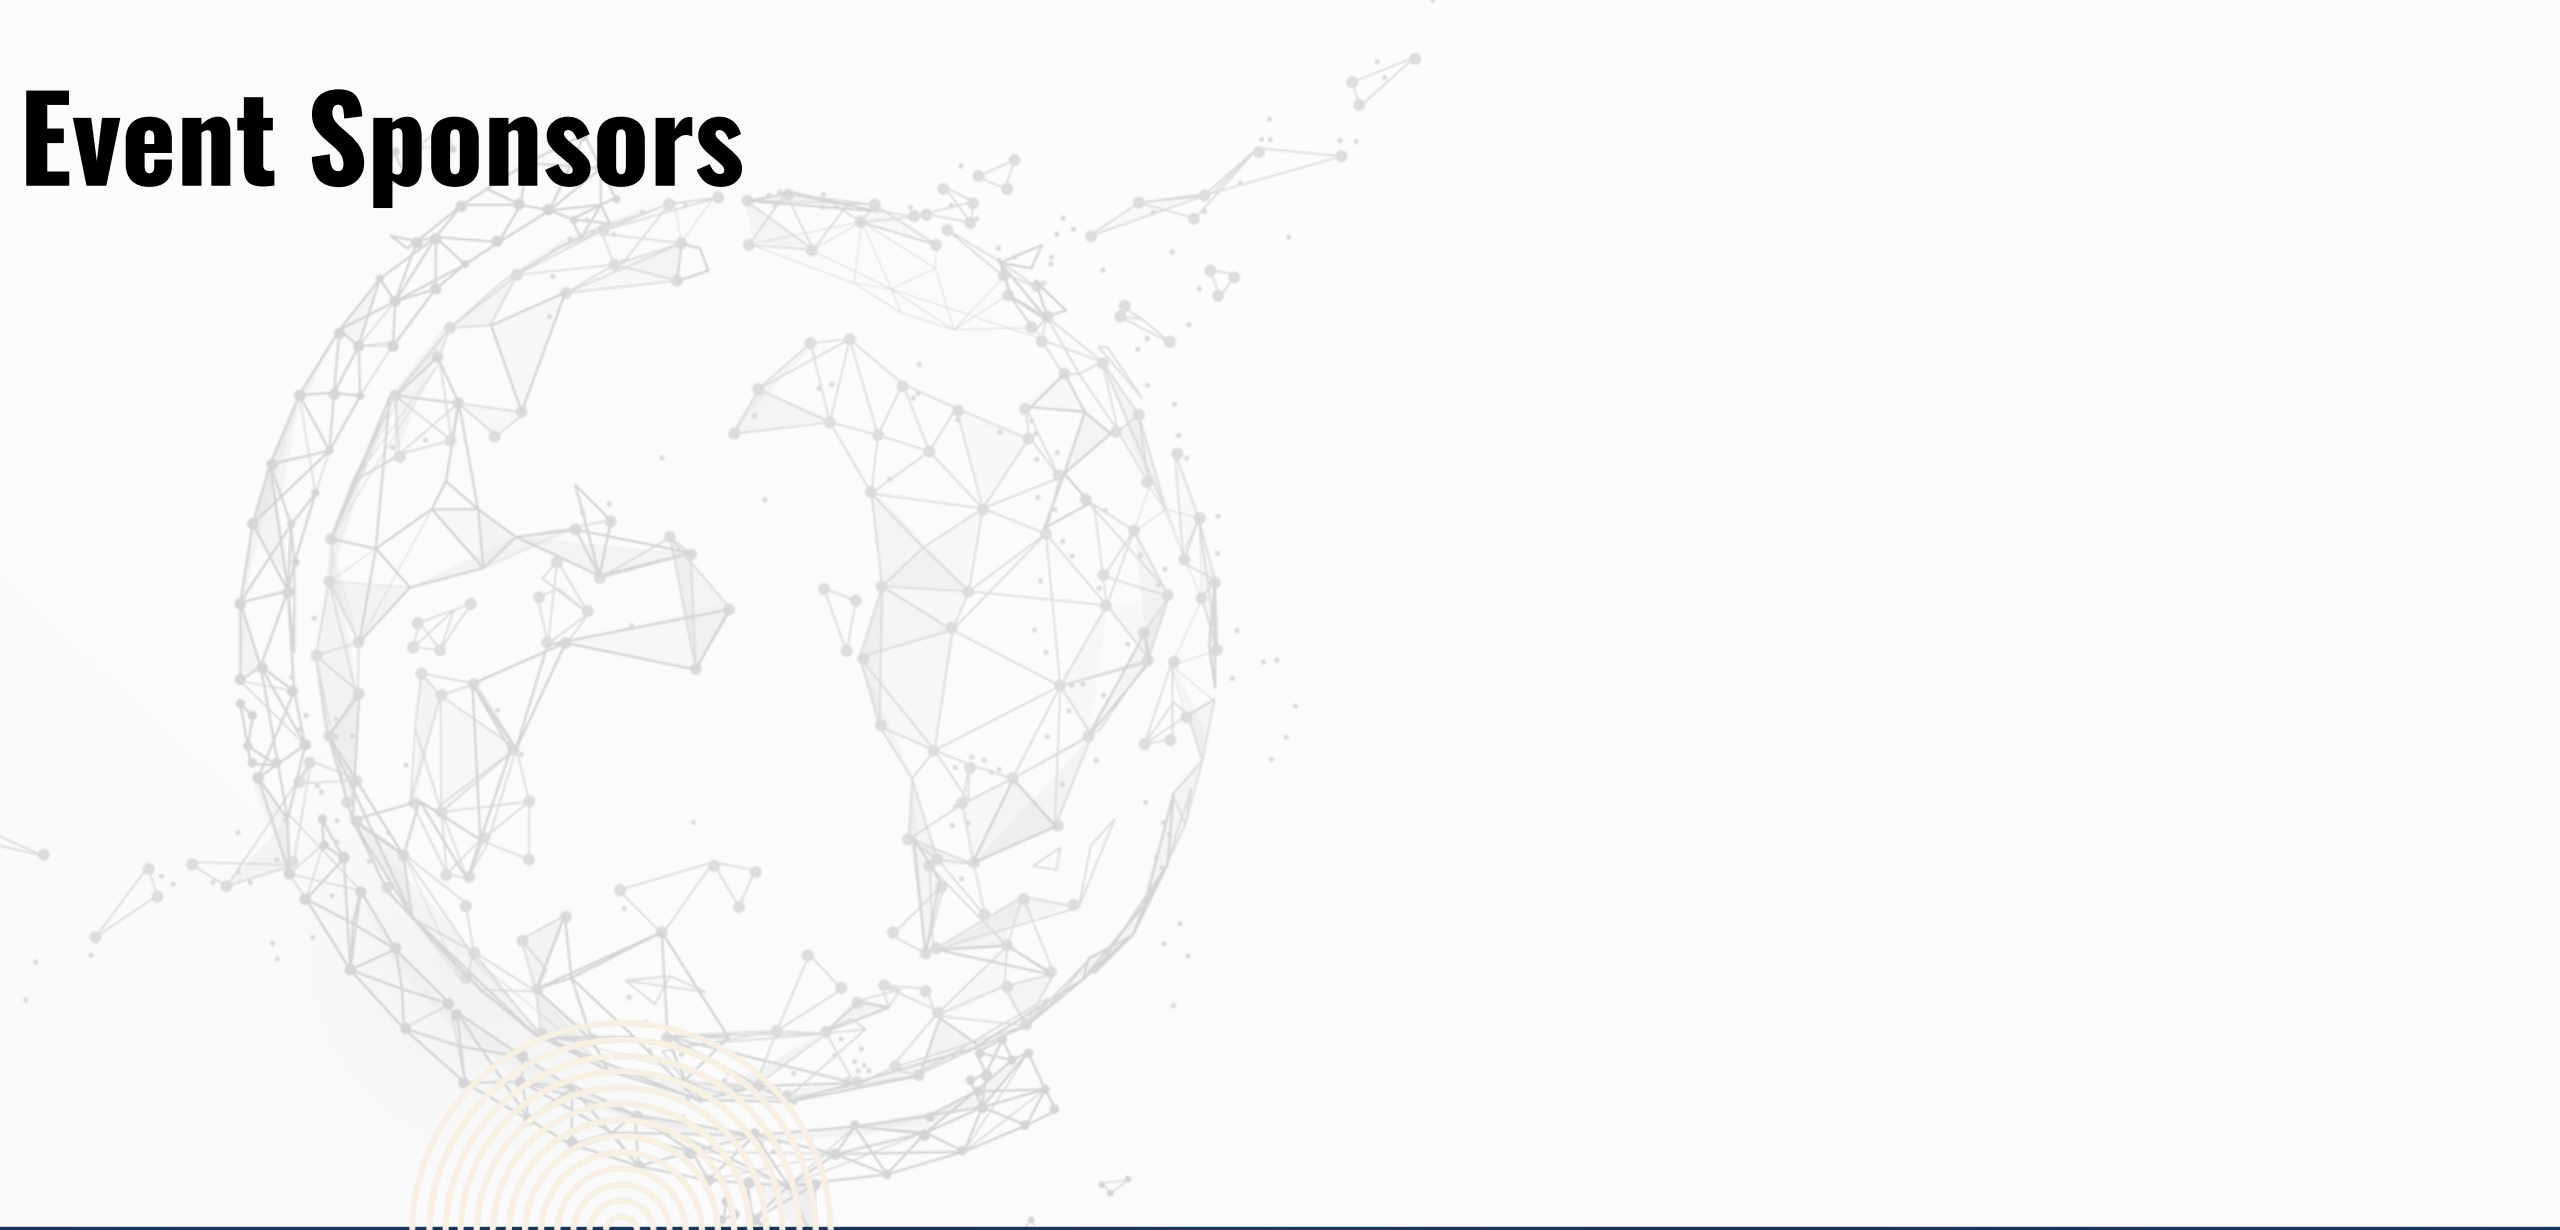

This blog post has been edited to include an answer to the comment section about programmatic exports.

As part of continued Power BI innovation, we're excited to announce support for paginated reports in Power BI Pro at this year's PASS Data Community Summit. Now Microsoft Power BI customers have the flexibility to create and consume interactive reports as well as paginated reports using Power BI Pro. The new capability will be rolled out gradually over the coming weeks and should be available in all regions by the end of the calendar year.
